

Tailor-made: Monitor Systems by Customer Request

Monitor Solution Provider Distec Implements Customer-specific Projects

Germering (Germany) March 20, 2018 – Distec GmbH - leading German specialist for TFT flat screens and system solutions for industrial and multimedia applications – has strengthened their specification for customer-specific monitor systems. This allows Distec to meet customer requests for increasingly high definition image quality with maximum contrast and large screen diagonals. The demand includes visually appealing design with the latest technologies for touch, PC, and communications interfaces. In order to fulfil the variety of requirements, Distec provides tailor-made solutions in addition to their comprehensive portfolio of standard displays. "We adjust our customized displays exactly to the desires of our customers, however complex they may be," explained Michael Dernbach, Product Marketing Manager Display Solutions with Distec. "The outcomes range from modified standard products to completely new developed monitors. At the Integrated Systems Europe Show in Amsterdam, we presented, for example, customer-specific displays with 4K UHD PCAP technology in large sizes up to 75 inches." In addition, Distec is now able to equip industrial POS-Line touchscreen monitors with capacitive buttons on request.

Buttons and Touchscreens on One Panel

Responding to customer requests and market needs, Distec now offers optional PCAP buttons for the robust PCAP touchscreen monitors and panel PCs of the POS-Line monitor series. Although touchscreens, when indicated with multi touch, are in high demand for industrial HMI technology, they will not replace classical button control elements completely in the near future. Quite the opposite: it is even en vogue to integrate both into one panel. "Industrial customers often prefer a combination of touchscreen operation and

conventional buttons," stated Michael Dernbach. "Classic buttons mainly serve as controls for security-related commands."

Industrial POS-Line Monitor from 15 to 24 Inches

The well-proven product family combines the newest technology with the latest, most appealing design. This provides an appropriate solution for all users requiring a robust metal housing for rough working environments, reliable 24/7 operation and (depending on use cases) a variety of different controller and front options. As needed, a CPU with passive cooling provides noiseless operation at 0 decibels and thus extended shelf life of the devices. In combination with front-end IP protection of up to IP65 and a temperature range from -25°C up to +65°C, they are ideally suited for use in harsh industrial and digital signage environments such as process and data visualization in production and logistic buildings, or digital signs in public areas.

About Distec

Distec is a company of the Fortec Group, the worldwide operating specialist for TFT flat screen and system solutions for industrial, multimedia and digital signage applications. Located in Germering near Munich in Germany, the company designs, produces and sells innovative solutions and a full range components, displays and services. Data Display Group supplies innovative Green IT solutions based on their hardware platforms and their own software to control the TFTs of partners AUO, Innolux, Kyocera, Mitsubishi, Ortustech, SGD, and Tianma as well as selected panels from other manufacturers. These system solutions - from assemblies and kits up to finished OEM products - are developed in their own R&D centers in Germering (Germany) and Ronkonkoma (NY/USA). The range of services includes customized developments and adaptations, product finishing and assembly of monitoring systems as well as the production of finished products and a complete after-sales service with RMA, repair and technical support. As a member of the Fortec Group, Distec has access to products, services, and expertise of a large high-tech company network, which makes a perfect complement to the product portfolio.
